

# S20/S30 Dust Filter

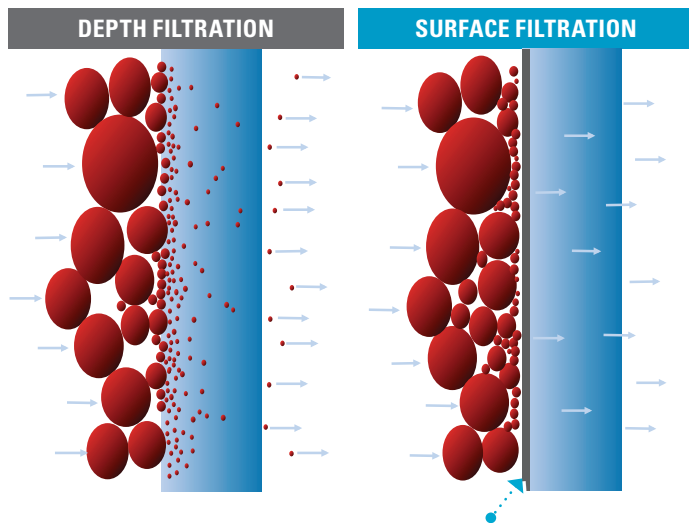

FOR THE S20 SWEEPMAX® AND S30 SWEEPMAX® PLUS

Tennant *True*® filters improve your cleaning operations. Our dust filters are designed to raise indoor air quality, optimize machine performance, and increase machine productivity.

Cylinder Dust Filter: **Part No. 1045900**

**Depth Filtration** traps dust particles within the filter, clogging the filter and shortening its life.

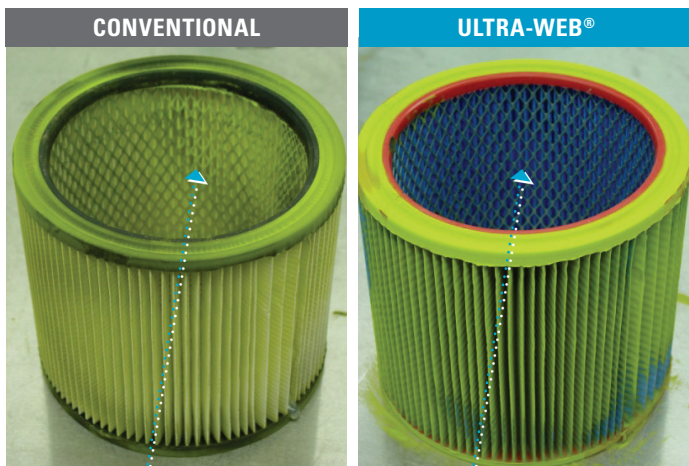

**Ultra-Web® nanofiber layer** stops dust on the surface, allowing for more efficient shake back performance and longer filter life.

## THE ULTRA-WEB® ADVANTAGE

Ultra-Web® nanofiber is a very-fine, resilient fiber that forms a web over the surface of the filter. The Ultra-Web layer:

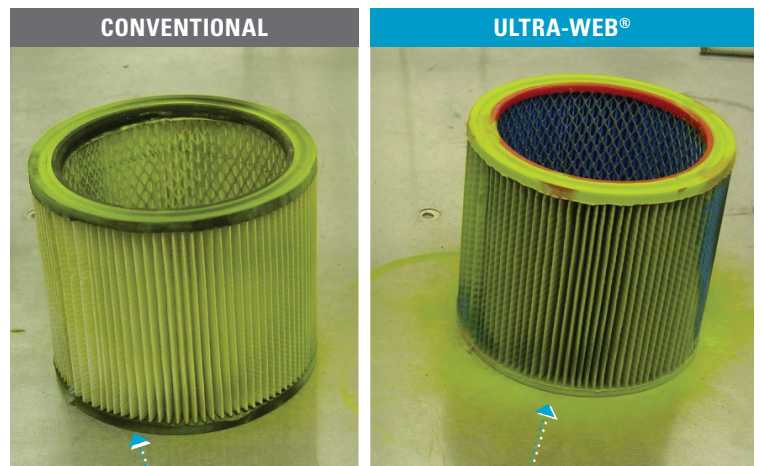

- Captures more dust on the surface of the filter over standard cellulose filters
- Improves shake-back cleaning performance
- Lowers maintenance costs through longer filter life
- Reduces air pressure drop during machine use, meaning better airflow and machine performance
- MERV 15 filtration efficiency rating\*

\*Minimum Efficiency Reporting Values, as defined by ASHRAE Standard 52.2

Yellow particles can be seen inside the filter, clogging the filter membrane

Dust **did not** penetrate the filter, resulting in longer filter life

Dust embedded in the filter is harder to clean off and shortens the filter life

Dust **falls off easily** during shake back for improved filter cleaning performance
