

# M20 & M30

## Pro-Panel® Wet Only with Conservation (WOC) Functionality

Now available on the Tennant M20 and M30, Pro-Panel Wet Only with Conservation (WOC) functionality gives you two options for cleaning efficiently in dusty environments, both allowed by OSHA silica dust control housekeeping requirements:

**Wet Sweeping:** continuous water flow while scrubbing provides moisture around debris so the recovery system can effectively pick it up and contain it in the recovery tank.

**Water Flooding:** flooding the floor effectively controls dust during scrubbing processes, preventing it from becoming airborne.

### Managing the Silica Dust Challenge

Cleaning in environments with fine dust like sand or silica poses a particular cleaning challenge. Using an M20 or M30 equipped with WOC functionality, you can clean your facility using methods allowed by OSHA silica dust housekeeping requirements, while also conserving time and resources.

### Conserve Time

Tennant M20 and M30 machines equipped with WOC functionality include the Pro-Panel console, allowing operators to quickly configure the machines for Wet Sweeping with a single touch (Leaf Button). This option uses the lowest water flow and down pressure settings, and at the same time extends scrub time by minimizing dump and fill cycles.

### Conserve Budget

Using WOC functionality increases productivity and reduces operating costs by employing a machine's lowest water flow and down pressure settings. Reducing water use results in fewer tank refills and reduces water usage costs. At the same time, low down pressure results in longer scrub brush life.

### Conserve Natural Resources

As water scarcity is a topic of increasing concern, companies and communities are looking for ways to decrease water usage. WOC functionality reduces the amount of water the machine uses, conserving this important resource. Since the setting also reduces wear on scrub brushes, the brushes last longer and result in fewer worn-out brushes in landfills.

### Learn more

Contact your Tennant Sales Representative for more information on the M20 and M30 with Pro-Panel WOC functionality.

Your representative can show you how you can address the challenge of managing fine dust while conserving time, money, and resources.
