INTRODUCTION

This manual is furnished with each new model. It provides necessary operation and maintenance instructions.

Read this manual completely and understand the machine before operating or servicing it.

This machine will provide excellent service. However, the best results will be obtained at minimum costs if:

- The machine is operated with reasonable care.
- The machine is maintained regularly - per the machine maintenance instructions provided.
- The machine is maintained with manufacturer supplied or equivalent parts.

PROTECT THE ENVIRONMENT

Please dispose of packaging materials, used components such as batteries and fluids in an environmentally safe way according to local waste disposal regulations.

Always remember to recycle.

MACHINE DATA

Please fill out at time of installation for future reference.

Model No. –
Serial No. –
Installation Date –

INTENDED USE

The S20 is an industrial rider machine designed to sweep hard surfaces (concrete, asphalt, stone, synthetic, etc). Typical applications include industrial warehouses, manufacturing facilities, distribution facilities, stadiums, arenas, convention centers, parking facilities, transportation terminals, and construction sites. Do not use this machine on soil, grass, artificial turf, or carpeted surfaces. This machine can be used both indoors and outdoors, but ensure there is adequate ventilation if used indoors. This machine is not intended for use on public roadways. Do not use this machine other than described in this Operator Manual.

SAFETY PRECAUTIONS

IMPORTANT SAFETY INSTRUCTIONS – SAVE THESE INSTRUCTIONS

The following precautions are used throughout this manual as indicated in their description:

WARNING: To warn of hazards or unsafe practices that could result in severe personal injury or death.

FOR SAFETY: To identify actions that must be followed for safe operation of equipment.

The following information signals potentially dangerous conditions to the operator. Know when these conditions can exist. Locate all safety devices on the machine. Report machine damage or faulty operation immediately.

WARNING: Batteries emit hydrogen gas. Explosion or fire can result. Keep sparks and open flame away. Keep covers open when charging.

WARNING: Lift arm pinch point. Stay clear of hopper lift arms.

WARNING: Raised hopper may fall. Engage hopper support bar.

WARNING: Moving belt and fan. Keep away.

WARNING: Machine can emit excessive noise. Hearing loss can result. Wear hearing protection. (Cab option only).

WARNING: Accident may occur. Do not operate vacuum wand while driving. (Vacuum wand option only)

FOR SAFETY:

1. Do not operate machine:
   - Unless trained and authorized.
   - Unless operator manual is read and understood.
   - Under the influence of alcohol or drugs.
   - While using a cell phone or other types of electronic devices.
   - Unless mentally and physically capable of following machine instructions.
   - If it is not in proper operating condition.
   - Without filters in place.
   - With brake disabled.
   - In areas where flammable vapors/liquids or combustible dusts are present.
   - In areas that are too dark to safely see the controls or operate the machine unless operating / headlights are turned on.
   - In areas with possible falling objects unless equipped with overhead guard.

2. Before starting machine:
   - Check machine for fluid leaks
   - Make sure all safety devices are in place and operate properly.
   - Check brakes and steering for proper operation.
   - Adjust seat and fasten seat belt (if so equipped).

3. When starting machine:
   - Keep foot on brake and directional pedal in neutral.

4. When using machine:
   - Use only as described in this manual.
   - Do not pick up burning or smoking debris, such as cigarettes, matches or hot ashes
   - Use brakes to stop machine.
   - Go slowly on inclines and slippery surfaces.
   - Do not sweep on ramp inclines that exceed 14% grade or transport (GVWR) on ramp inclines that exceed 17.6% grade.
   - Reduce speed when turning.
   - Keep all parts of body inside operator station while machine is moving.

This machine may be equipped with technology that automatically communicates over the cellular network. If this machine will be operated where cell phone use is restricted because of concerns related to equipment interference, please contact a Tennant representative for information on how to disable the cellular communication functionality.
SAFETY PRECAUTIONS

- Use care when reversing machine.
- Move machine with care when hopper is raised.
- Make sure adequate clearance is available before raising hopper.
- Do not raise hopper when machine is on an incline.
- Keep children and unauthorized persons away from machine.
- Do not carry passengers on any part of the machine.
- Always follow safety and traffic rules.
- Report machine damage or faulty operation immediately.

5. Before leaving or servicing machine:
- Stop on level surface.
- Set parking brake.
- Turn off machine and remove key.

6. When servicing machine:
- All work must be done with sufficient lighting and visibility.
- Keep work area well ventilated.
- Avoid moving parts. Do not wear loose clothing, jewelry and secure long hair.
- Block machine tires before jacking machine up.
- Do not push or tow the machine on inclines with the brake disabled.
- Jack machine up at designated locations only. Support machine with jack stands.
- Use hoist or jack that will support the weight of the machine.
- Do not push or tow the machine without an operator in the seat controlling the machine.
- Do not power spray or hose off machine near electrical components.
- Disconnect battery connections and charger cord before working on machine.
- Do not pull on battery charger cord to unplug. Grasp plug at outlet and pull.
- Keep all metal objects off batteries.
- Use a non-conductive battery removal device.
- Use a hoist and adequate assistance when lifting batteries.
- Avoid contact with battery acid.
- Use cardboard to locate leaking hydraulic fluid under pressure.
- Battery installation must be done by trained personnel.
- Follow site safety guidelines concerning battery removal.
- All repairs must be performed by trained personnel.
- Do not modify the machine from its original design.
- Use Tennant supplied or approved replacement parts.
- Do not disconnect the off-board charger’s DC cord from the machine receptacle when the charger is operating. Arcing may result. If the charger must be interrupted during charging, disconnect the AC power supply cord first.
- Do not use incompatible battery chargers as this may damage battery packs and potentially cause a fire hazard.
- Inspect charger cord regularly for damage.
- Wear personal protective equipment as needed and where recommended in this manual.

For Safety: wear hearing protection.

For Safety: wear protective gloves.

For Safety: wear eye protection.

For Safety: wear protective dust mask.

7. When loading/unloading machine onto/off truck or trailer:
- Empty debris hopper before loading machine.
- Turn off machine and remove key.
- Use ramp, truck or trailer that will support the weight of the machine and operator.
- Do not load/unload on ramp inclines that exceed 17.6% grade.
- Use winch. Do not drive the machine onto/off the truck or trailer unless the load height is 380 mm (15 in) or less from the ground.
- Set parking brake after machine is loaded.
- Block machine tires.
- Tie machine down to truck or trailer.
The following safety labels are mounted on the machine in the locations indicated. If any label becomes damaged or illegible, install a new label in its place.

**WARNING LABEL** – Lift arm pinch point. Stay clear of hopper lift arms.

Located on both hopper lift arms.

**WARNING LABEL** – Raised hopper may fall. Engage hopper support pin.

Located on the hopper support bar.

**WARNING LABEL** – Machine can emit excessive noise. Hearing loss can result. Wear hearing protection.

Located only on machines with cab option.

---

**WARNING**

- Lift arm pinch point. Stay clear of hopper lift arms.
- Raised hopper may fall. Engage hopper support bar.
- Machine can emit excessive noise. Hearing loss can result. Wear hearing protection.

**AVERTISSEMENT**

- Attention au point d’articulation ou bras d’élévation. Ne vous approchez pas des bras d’élévation de la trémie.
- La trémie levée peut tomber. Engagez la barre de support de la trémie.

**ADVERTENCIA**

- Punto de pincemiento del brazo elevador. No se acerque a los brazos elevadores de la caja colectora.
- La caja colectora en posición elevada puede caer. Monte la barra de apoyo.
- La máquina puede producir ruido excesivo. Puede causar pérdida de capacidad auditiva. Lleve protección para los oídos.

**AVERTISSEMENT**

- La courroie et le ventilateur sont en mouvement. Ne vous approchez pas.

**ADVERTENCIA**

- Correa y ventilador en movimiento. Manténgase alejado.
SAFETY PRECAUTIONS

FOR SAFETY LABEL –
Read manual before operating machine.

WARNING LABEL –
- Batteries emit hydrogen gas. Explosion or fire can result. Keep sparks and open flame away. Keep covers open when charging.

Located on the side of the operator compartment.

Located on the optional vacuum wand.

Located on back of main electrical panel.

WARNING LABEL – Flammable materials can cause explosion or fire. Do not use flammable materials in tank.

Flammable materials can cause explosion or fire. Do not use flammable materials in tank. Only use water.

Located on the tank.
MACHINE COMPONENTS

1. Operator seat
2. Steering wheel
3. Instrument panel
4. Hopper cover
5. Side brush

10. Hopper temperature light – Thermo–Sentry
11. Clogged dust filter light
12. Hopper door closed light
13. Clogged hydraulic filter light
14. Battery discharge indicator
15. Hour meter
16. Steering wheel
17. Horn button
18. Steering wheel tilt handle
19. Key switch
20. Side brush lever
21. Operating / hazard lights switch
22. Power kill switch
23. Right side brush adjustment knob
24. Left side brush adjustment knob (Dual side brush option only)
25. Main cover lever
26. Wet side brush dust control switch (option)
27. Wet side brush dust control indicator light (option)
SYMBOL DEFINITIONS

These symbols identify controls, displays, and features on the machine:

- Filter shaker
- Vacuum fan on
- Vacuum fan off
- Hopper down
- Hopper up
- Hopper door open
- Hopper door close (lever)
- Main brush down and on
- Main brush up and off
- Battery charging system
- Clogged dust filter
- Thermo–Sentry
- Hopper door closed (light)
- Hour meter
- Steering wheel tilt
- Off
- On
- Start
- Horn
- Side brush down and on
- Side brush up and off
- Operating lights
- Hazard light
- Side brush pressure
- Parking brake
- Clogged hydraulic filter

INSTALLING BATTERIES

FOR SAFETY: When servicing machine: Keep all metal objects off batteries. Use a non-conductive battery removal device. Use a hoist and adequate assistance when lifting batteries. Battery installation must be done by trained personnel. Follow site safety guidelines concerning battery removal.

BATTERY SPECIFICATIONS

Six 6−volt deep cycle lead acid batteries or 2 18−volt batteries.

Maximum battery dimensions: 178 mm (7 in) W x 297 mm (11.7 in) L x 424 mm (16.7 in) H or 282 mm (11.1 in) W x 485 (19.1 in) L x 590 mm (23.25 in) H.

1. Park the machine on a level surface and remove the key.

2. Open the main cover

3. With adequate assistance carefully install the batteries into the battery compartment tray and arrange the battery posts as shown.

NOTE: For large traction batteries, use a hoist to install the battery.

4. Using the supplied battery post boots, connect the cables to the battery posts, RED TO POSITIVE (+) & BLACK TO NEGATIVE (−).

IMPORTANT: Before charging, make sure that the charger setting is properly set for the battery type.
OPERATION OF CONTROLS

DIRECTIONAL PEDAL
Press the top of the Directional pedal to move forward and the bottom of the pedal to move backward. The pedal returns to the neutral position when it is released.

BRAKE PEDAL
Press the Brake pedal to stop the machine.

PARKING BRAKE PEDAL
Press the Brake pedal down as far as possible and use toe to lock the Parking brake pedal into place. Press the Brake pedal to release the parking brake. The Parking brake pedal will return to the unlocked position.

PARKING BRAKE LIGHT
The parking brake light comes on when the parking brake is engaged. Release the parking brake before operating the machine.
MAIN COVER LEVER
The main cover lever releases and locks the seat support.

Release: Pull the lever back and lift the main cover.

NOTE: Remove the optional Wet Side Brush Dust Control Water Tank before opening the main cover.

Lock: Close the main cover and release the lever to lock the cover in place.

STEERING WHEEL TILT HANDLE
The steering wheel tilt handle controls the angle of the steering wheel.

Adjust: Pull out the tilt handle, move the steering wheel up or down, and release the tilt handle.

MAIN BRUSH ADJUSTMENT KNOB
The main brush adjustment knob changes the amount of contact the main brush has with the surface being swept. Refer to ADJUSTING THE MAIN BRUSH WIDTH section of this manual.

NOTE: The main brush adjustment knob can be repositioned if it interferes with any of the controls. Lift the knob, turn it to the desired position, and release it.

SIDE BRUSH ADJUSTMENT KNOB
The side brush adjustment knob changes the amount of contact the side brush has with the surface being swept. Refer to ADJUSTING THE SIDE BRUSH PATTERN section of this manual.

NOTE: The side brush adjustment knob can be repositioned. Lift the knob, turn it to the desired position, and release it.
CLOGGED DUST FILTER LIGHT

The clogged dust filter light comes on when the hopper dust filter is clogged.

To clean the filter, hold the vacuum and filter shaker lever in the **Filter shaker** position. If the clogged filter light remains lit, manually clean the hopper dust filter. See **HOPPER DUST FILTER** in the **MAINTENANCE** section of this manual.

**NOTE:** The clogged dust filter light also comes on when the hopper door is closed and the vacuum fan is on.

HOPPER DOOR CLOSED LIGHT

The hopper door closed light comes on when the hopper door is closed.

Make sure the hopper door is open all the way and the hopper door closed light is off, before sweeping.

CLOGGED HYDRAULIC FILTER LIGHT

The clogged hydraulic filter light comes on when the hydraulic filter is clogged. If this light remains on, have the hydraulic filter changed as soon as possible.

HOPPER TEMPERATURE LIGHT – THERMO–SENTRY

The hopper temperature light comes on when the Thermo–Sentry senses that there is excessive heat in the hopper, possibly from a fire. The Thermo–Sentry will also move the vacuum and filter shaker lever to the **Vacuum fan off** position. If this happens, stop the machine, eliminate the source of the heat, and return the lever to the **Vacuum fan on** position.
**POWER KILL SWITCH**

The power kill switch halts all power to the machine.

Halt: Push the power kill switch in.

Restart: Turn off the machine. Turn the power kill switch to the right to release the switch. Turn on the machine.

**BATTERY DISCHARGE INDICATOR**

The battery discharge indicator shows the charge level of the batteries. It displays the charge level when the machine is operating.

When the batteries are fully charged, the indicator on the far right is lit. As the batteries discharge, the indicator will move along the display to the left. Recharge the batteries when the indicator flashes.

*NOTE:* The reading on the battery discharge indicator is not accurate when the machine is first powered on. Operate the machine a few minutes before reading the charge level of the batteries.

*NOTE:* The battery discharge indicator will not reset from the flashing indicator unless the batteries have been fully charged.

---

**HOUR METER**

The *Hour meter* records the hours the machine was operated. Use this information to determine machine service intervals.

**OPERATING / HAZARD LIGHTS SWITCH**

The operating / hazard lights switch powers on and off the headlights and taillights and the optional hazard light.

Operating lights on: Press the top part of the switch.

Operating / Hazard lights on (Optional): Press the bottom part of the switch.

Off: Place the switch in the middle position.
OPERATOR SEAT
The front–to–back adjustment lever adjusts the seat position.

DELUXE SUSPENSION SEAT (OPTION)
The operator seat has three adjustments: backrest angle, operator weight, and front to back.

The operator’s weight adjustment lever controls the seat weight adjustment. The lever has three positions: lightweight, middleweight, and heavyweight.

SEAT BELTS (OPTION)
FOR SAFETY: Before starting machine, adjust seat and fasten seat belt (if equipped).
HOW THE MACHINE WORKS

The steering wheel controls the direction of machine travel. The directional pedal controls the speed and forward/reverse direction. The brake pedal slows and stops the machine.

The side brush sweeps debris into the path of the main brush. The main brush sweeps debris from the floor into the hopper. The vacuum system pulls dust and air through the hopper and the dust control system.

The machine also has a wet side brush dust control option to help contain dust.

The machine also has an optional dry sweeping HEPA filtration system to help contain fine dust.

When sweeping is finished, shake the dust filter and empty the hopper.

BRUSH INFORMATION

For best results, use the correct brush type for the cleaning application.

NOTE: The amount and type of soilage play an important role in determining the type of brushes to use. Contact a Tennant representative for specific recommendations.

Polypropylene Sand Wedge Main Brush – Recommended for heavy accumulation of sand and other fine particles.

Polypropylene Window Main Brush – Recommended for light litter, especially on smooth floors.

Polypropylene 8-double row Main Brush – Recommended for general sweeping applications.

Polypropylene and Wire 8-double row Main Brush – Recommended for general sweeping and slightly impacted debris.

Polyester 8-double row Main Brush – Recommended for general sweeping, especially on rough or irregular surfaces. Nylon has a long wear life.

Polyester Full Fill Main Brush – Recommended for accumulation of sand and other fine particles. Nylon has a long wear life.

Natural Fiber 8-double row Main Brush – Recommended for accumulation of sand and other very fine particles.

Polypropylene Side Brush – Recommended for general sweeping of light to medium debris.

Nylon Side Brush – Recommended for general sweeping of rough or irregular surfaces. Nylon has a long wear life.

Flat Wire Side Brush – Recommended for outdoor curb-side sweeping where dirt is heavy or compacted.
WHILE OPERATING THE MACHINE

Pick up oversized debris before sweeping. Pick up wire, string, twine, large pieces of wood, or any other debris that could become wrapped around or tangled in the brushes.

NOTE: Debris can be placed in the hopper through the hopper access door on the front of the hopper.

Drive as straight a path as possible. Avoid bumping into posts or scraping the sides of the machine. Overlap the sweep paths by several centimeters (a few inches).

Avoid turning the steering wheel too sharply when the machine is in motion. The machine is very responsive to the movement of the steering wheel. Avoid sudden turns, except in emergencies.

Adjust the machine speed and brush pressure. Use the lowest brush pressure for best performance.

Keep the machine moving to prevent damaging floor finishes.

If poor cleaning performance is observed, stop cleaning and refer to MACHINE TROUBLESHOOTING in this manual.

Perform the Daily Maintenance Procedures after each use (see MACHINE MAINTENANCE in this manual).

Drive the machine slowly on inclines. Use the brake pedal to control machine speed on descending inclines. Sweep with the machine up inclines rather than down inclines.

FOR SAFETY: When using machine, go slowly on inclines and slippery surfaces. Do not sweep on ramp inclines that exceed 14% grade or transport (GVWR) on ramp inclines that exceed 17.6% grade.

Do not operate machine in areas where the ambient temperature is above 43 °C (110 °F). Do not operate sweeping functions in areas where the ambient temperature is below freezing 0 °C (32 °F).
PRE-OPERATION CHECKLIST

☐ Check the machine for fluid leaks.

☐ Check the main sweep brush for damage and wear. Remove string, banding, plastic wrap, or other debris wrapped around the brush.

☐ Check the main brush compartment right skirt for damage and wear.

☐ Check the dry dust control (Option) skirts for damage and wear.

☐ Check the side brush(es) for damage and wear. Remove string, banding, plastic wrap, or other debris wrapped around the brush.

☐ Check the main brush compartment left skirt for damage and wear.

☐ Check the hydraulic fluid level.

☐ Check the battery electrolyte level.

☐ Check for rubbing hoses or wires and leaks or obstructions.

☐ Check the horn, headlights, taillights, safety lights, and backup alarm (if equipped).

☐ Check all controls for proper operation.

☐ Check the hopper skirts and seals for damage and wear.

☐ Check the brakes and steering for proper operation.

☐ Check the service records to determine maintenance requirements.

☐ Clean hopper.

☐ Check the cyclonic chamber and dust tray flaps for wear, damage, and ensure they open (HEPA option).
OPERATION

STARTING THE MACHINE

1. Sit in the operator’s seat and engage the brakes with the directional pedal in neutral.

FOR SAFETY: When starting machine, keep foot on brake and directional pedal in neutral.

2. Turn on the machine.

3. Release the machine parking brake.

4. Drive the machine to the area to be cleaned.
TURNING OFF THE MACHINE

1. Stop sweeping.

2. Take your foot off the directional pedal. Step on the brake pedal.

NOTE: The machine will coast for a short distance when your foot is removed from the directional pedal. Use the brake pedal to stop the machine.

3. Set the machine parking brake.

4. Shut the machine off. Remove the key.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.
SWEEPING

1. Ensure that the hopper is completely lowered.

2. Push the hopper door lever forward to open the hopper door.

3. Move the vacuum and filter shaker lever to the Vacuum fan on position.

   *NOTE: Excessive heat in the hopper will cause the Thermo Sentry to move the vacuum and filter shaker lever to the Vacuum fan off position. It will also make the hopper temperature light come on. If this happens, stop the machine, eliminate the source of the heat, and return the lever to the Vacuum fan on position.*

4. Place the main brush lever in the right Main brush down and on position. The brush will automatically start rotating.

   *NOTE: The vacuum fan duct should be off when sweeping wet debris.*

5. Place the side brush lever in the left Side brush down and on position. The brush will automatically start rotating.

6. Sweep as needed.
STOP SWEEPING

1. Place the side brush lever in the right **Side brush up and off** position.

2. Place the main brush lever in the left **Main brush up and off** position.

3. Pull and hold the hopper door lever back until the hopper door closed light comes on.

4. Shake the dust filter by holding the vacuum and filter shaker lever in the **Filter shaker** position for 30 seconds.
EMPTYING THE HOPPER

1. Stop sweeping and shake the filter.

2. Pull and hold the hopper door lever back until the hopper door closed light comes on.

3. Slowly drive the machine to the debris site or debris container.

4. Pull and hold the hopper raise / lower lever back and raise the hopper to the desired height. Release the lever into the Hold position.

5. Drive the machine up to the debris container. Position the hopper over the debris container.

FOR SAFETY: When using machine, move machine with care if hopper is raised.

6. Move the vacuum and filter shaker lever into the Vacuum fan off position.

7. Push the hopper door lever forward to empty the hopper.

FOR SAFETY: When using machine, do not raise hopper when machine is on an incline. Make sure adequate clearance is available before raising hopper.

NOTE: Be aware that the minimum ceiling height needed to high dump the hopper is 2490 mm (98 in).
8. Pull and hold the hopper door lever back until the hopper door closed light comes on.

9. Slowly back the machine away from the debris site or debris container.

**FOR SAFETY:** When using machine, use care when reversing machine.

10. Push and hold the hopper raise / lower lever forward to lower the hopper. Release the lever into the **Hold** position.

11. Push the hopper door lever forward to open the hopper door.

12. Move the vacuum and filter shaker lever into the **Vacuum fan on** position.
ENGAGING HOPPER SUPPORT BAR

1. Set the machine parking brake.

FOR SAFETY: When starting machine, keep foot on brake and directional pedal in neutral.

2. Turn on the machine.

FOR SAFETY: When using machine, make sure adequate clearance is available before raising hopper.

NOTE: Be aware that the minimum ceiling height needed to high dump the hopper is 2490 mm (98 in).

3. Pull and hold the hopper lever back into the **Hopper up** position to raise the hopper. Release the hopper lever into the **Hold** position.

FOR SAFETY: Raised hopper may fall. Engage hopper support bar.

4. Lower and position the hopper support bar onto the support bar stop.
5. Slowly lower the hopper so the hopper support bar rests on the support bar stop.

WARNING: Lift arm pinch point. Stay clear of hopper lift arms.

6. Shut the machine off.

FOR SAFETY: When starting machine, keep foot on brake and directional pedal in neutral.

2. Pull and hold the hopper raise / lower lever back and raise the hopper slightly. Release the lever into the **Hold** position.

3. Put the support bar in its storage position

WARNING: Lift arm pinch point. Stay clear of hopper lift arms.
4. Push and hold the hopper raise / lower lever forward to lower the hopper. Release the hopper lever into the Hold position.

5. Shut the machine off.
OPTIONS

VACUUM WAND

The vacuum wand uses the machine's vacuum system. The vacuum hose and wand allow pick-up of debris that is out of reach of the machine.

1. Stop the machine within reach of the area to be vacuumed.

2. Set the machine parking brake and turn the machine off.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, and turn off machine.

NOTE: If the operator is not in the seat, the parking brake must be engaged or the machine will automatically shut off.

3. Open the hopper cover and prop the cover open.

4. Remove the vacuum wand from the mounting clips and the hose from the storage compartment.

5. Connect the vacuum hose to the vacuum wand.

6. Open the access door located at the front of the machine.

7. Connect the other end of the vacuum hose to the hopper hose connector.

8. Turn on the machine power.

9. Pull and hold the hopper door lever back until the hopper door closed light comes on.
10. Move the vacuum and filter shaker lever into the Vacuum fan on position.

11. Vacuum the area as needed.

   WARNING: Accident may occur. Do not operate vacuum wand while driving.

12. When finished, push the hopper door lever forward into the Hopper door open position to open the hopper door.

13. Shut off the machine.

14. Remove the vacuum hose from the hopper connection.

15. Close the access door.

16. Disconnect the vacuum hose from the vacuum wand.

17. Put the vacuum wand in the mounting clips and hose into the storage compartment.

18. Close the hopper cover.

TOWER BUMPERS (OPTION)

The tower bumpers help protect the machine from being damaged. Open the tower bumpers before opening the seat support.

To open the bumpers:

1. Pull the pin from the bracket and the bumper.

2. Open the tower bumper.

3. Close and secure the tower bumpers before operating the machine.
WET SIDE BRUSH DUST CONTROL (OPTION)

The *wet side brush dust control* is useful in dusty conditions to control the dust created by the side brush(es).

1. Set the Parking brake.

   **FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine and remove key.**

2. Remove the water tank cap. Fill the tank with water. The water level can easily be seen on the side of the water tank. Replace the water tank cap.

   **WARNING:** Flammable materials can cause explosion or fire. Do not use flammable materials in tank.

Use the *wet side brush dust control switch* to turn the water sprayer on and off.

Bottom (OFF) position: Water sprayer is off.

Top (ON) position: Water will spray when the machine is moving. The indicator light will display green.

**NOTE:** if the indicator light displays red, the water tank is empty and needs to filled.

HEPA FILTER SYSTEM TROUBLESHOOTING TABLE

Refer to the troubleshooting table below and the troubleshooting procedures if excessive dust is noted on machines equipped with the HEPA filter during machine operation.

<table>
<thead>
<tr>
<th>STEP</th>
<th>ACTION</th>
<th>NOT DUSTING</th>
<th>DUSTING</th>
</tr>
</thead>
</table>
| 1    | * Use electric shaker to shake primary dust filter  
* Empty hopper | Resume Sweeping | Proceed to Step 2 |
| 2    | * Inspect seal at front hopper access door | Resume Sweeping | Proceed to Step 3 |
| 3    | * Remove primary filter and place in plastic bag.  
* Manually tap filter to remove dust.  
* Inspect seal on filter cover  
* Inspect seal to vacuum fan inlet | Resume Sweeping | Proceed to Step 4 |
| 4    | * Open upper cyclone clean out door and inspect  
* Vacuum out dust (HEPA certified vacuum) if buildup is heavy | Resume Sweeping | Proceed to Step 5 |
| 5    | * Raise hopper to inspect cyclone and primary dust filter  
debris tray flaps  
* Flaps must move freely  
* Remove debris buildup if flap movement is restricted | Resume Sweeping | Proceed to Step 6 |
| 6    | * Inspect side brush dust control skirts for damage and adjustment | Resume Sweeping | Proceed to Step 7 |
| 7    | * Raise hopper to inspect wheel pocket skirts  
* Open side brush doors and inspect skirts  
* Inspect sweep chamber skirts | Resume Sweeping | Proceed to Step 8 |
| 8    | * Inspect HEPA filter box inlet hose.  
* Check for rips, attachment, and restrictions inside the hose | Resume Sweeping | Proceed to Step 9 |
| 9    | * Check primary filter seal height on shaker plate  
* Measure height from shaker plate mount bracket to top of lower cyclone box | Resume Sweeping | Adjust dust filter seal height |

</table>

NOTE: Change the hydraulic fluid, filter, and suction strainer, indicated (*), after every 800 hours for machines NOT originally equipped with TennantTrue premium hydraulic fluid. (See Hydraulics section).

LUBRICANT/FLUID
DW . . . Distilled water
GL . . . SAE 90 Gear lubricant
HYDO . TennantTrue premium hydraulic fluid or equivalent
SPL . . . Special lubricant, Lubriplate EMB grease (TENNANT part no. 01433–1)

NOTE: More frequent intervals may be required in extremely dusty conditions.
LUBRICATION

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

PROPELLING GEARBOX (S/N 000000–005799)
Check the lubricant level in the propelling gearbox after every 100 hours of operation. Change the gear lubricant, and the drain and fill-level plug seals after the first 50 hours of operation, and then after every 800 hours of operation.

REAR WHEEL SUPPORT (S/N 000000–005799)
The rear wheel support pivots the rear wheel to steer the machine. The support has two grease fittings for the bearings. Raise the machine so the rear wheel support assembly is off the floor. Fill one of the grease fittings while rotating the gearbox from stop to stop. Fill the second grease fitting while rotating the gearbox back to the original position. The bearing cavity is full when grease comes out of the top seal.

Lubricate the rear wheel support after every 200 hours of machine operation, or after steam cleaning the gearbox area.

FOR SAFETY: When servicing machine, block machine tires before jacking up machine.

FOR SAFETY: When servicing machine, jack up machine at designated locations only. Block machine up with jack stands.

STEERING LINK (S/N 000000–005799)
Lubricate the steering link after every 200 hours of machine operation.
FRONT WHEEL BEARINGS
Repack and adjust the front wheel bearings every 400 hours of operation.

HOPPER LIFT ARM PIVOTS
Lubricate the hopper lift arm bearings after every 200 hours of operation.

HYDRAULICS

HYDRAULIC FLUID RESERVOIR
Check the hydraulic fluid level and operating temperature daily. The hopper must be down when checking the hydraulic fluid level.

Machines (S/N 000000–005693) have a filler cap with a fluid level dipstick. The hydraulic fluid level should be between the full and add markings on the dipstick.

Machines (S/N 005694–) have a fluid level gauge on the hydraulic tank. The hydraulic fluid level should be between the two lines on the hydraulic gauge.

A filler cap is mounted on top of the reservoir. It has a built-in breather and fluid level dipstick. Replace the cap after every 800 hours of operation.

Lubricate the filler cap gasket with a film of hydraulic fluid before putting the cap back on the reservoir.

ATTENTION! Do not overfill the hydraulic fluid reservoir or operate the machine with a low level of hydraulic fluid in the reservoir. Damage to the machine hydraulic system may result.
Drain and refill the hydraulic fluid reservoir with new TennantTrue premium hydraulic fluid after every 2400 hours of operation. Machines have a blue colored drop (left photo) on the hydraulic fluid label if originally equipped with TennantTrue premium hydraulic fluid.

NOTE: Change the hydraulic fluid, filter, and suction strainer after every 800 hours for ALL machines that have NOT consistently used TennantTrue premium hydraulic fluid or equivalent.

The reservoir has a built-in strainer outlet that filters hydraulic fluid before it enters the system. Replace the strainer after every 2400 hours of operation.

The hydraulic fluid filter is located in front of the hydraulic reservoir. Replace the filter element after every 1200 hours of operation or if the clogged hydraulic filter light remains on. Check the hydraulic fluid level and refill as needed.

**HYDRAULIC FLUID**

There is one recommended fluid:

<table>
<thead>
<tr>
<th>Part number</th>
<th>ISO Grade</th>
<th>Capacity</th>
</tr>
</thead>
<tbody>
<tr>
<td>1057707</td>
<td>32</td>
<td>3.8 L (1 gal)</td>
</tr>
<tr>
<td>1057708</td>
<td>32</td>
<td>19 L (5 gal)</td>
</tr>
</tbody>
</table>

If using a locally–available hydraulic fluid, be sure the specifications match the Tennant hydraulic fluid specifications. Substitute fluids can cause premature failure of hydraulic components.

**ATTENTION!** Hydraulic components depend on system hydraulic fluid for internal lubrication. Malfunctions, accelerated wear, and damage will result if dirt or other contaminants enter the hydraulic system.

**HYDRAULIC HOSES**

Check the hydraulic hoses after every 800 hours of operation for wear or damage.

**FOR SAFETY:** When servicing machine, use cardboard to locate leaking hydraulic fluid under pressure.

High pressure fluid escaping from a very small hole can almost be invisible, and can cause injury.

Contact appropriate personnel if a leak is discovered.

**ATTENTION: Only use TENNANT supplied hydraulic hoses or equivalent rated hydraulic hoses.**
MAINTENANCE

BATTERIES

FOR SAFETY: Before leaving or servicing machine, stop on level surface, turn off machine, set parking brake (if equipped), and remove key.

The lifetime of the batteries depends on their proper maintenance. To get the most life from the batteries;

- Do not charge the batteries more than once a day and only after running the machine for a minimum of 15 minutes.
- Do not leave the batteries partially discharged for long period of time.
- Only charge the batteries in a well-ventilated area to prevent gas build up. Charge batteries in areas with ambient temperatures 27°C (80°F) or less.
- Allow the charger to complete charging the batteries before re-using the machine.
- Maintain the proper electrolyte levels of flooded (wet) batteries by checking levels weekly.

CHECKING THE ELECTROLYTE LEVEL

The flooded (wet) lead–acid batteries require routine maintenance as described below. Check the battery electrolyte level weekly.

NOTE: Do Not check the electrolyte level if the machine is equipped with the battery watering system. Proceed to the BATTERY WATERING SYSTEM (OPTION).

The level should be slightly above the battery plates as shown before charging. Add distilled water if low. DO NOT OVERFILL. The electrolyte will expand and may overflow when charging. After charging, distilled water can be added up to about 3 mm (0.12 in) below the sight tubes.

NOTE: Make sure the battery caps are in place while charging. There may be a sulfur smell after charging batteries. This is normal.

MAINTENANCE–FREE BATTERIES

Maintenance–free batteries do not require watering. Cleaning and other routine maintenance is still required.

CHECKING CONNECTIONS / CLEANING

After every 200 hours of use check for loose battery connections and clean the surface of the batteries, including terminals and cable clamps, with a strong solution of baking soda and water. Replace any worn or damaged wires. Do not remove battery caps when cleaning batteries.

FOR SAFETY: When servicing machine, keep all metal objects off batteries. Avoid contact with battery acid.
MAINTENANCE

CHARGING THE BATTERIES
(Off-Board Charger)

IMPORTANT: Before charging, make sure that the charger setting is properly set for the battery type.

1. Drive the machine to a flat, dry surface in a well-ventilated area.

2. Stop the machine and turn off the machine power.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, turn off machine, and remove key.

3. Open the main cover.

NOTE: Make sure the batteries have the proper electrolyte level before charging. See CHECKING THE ELECTROLYTE LEVEL.

4. Plug the charger AC power supply cord into a properly grounded outlet.

5. Unplug the battery connector from the machine connector.

6. Plug the charger connector into the battery connector.

WARNING: Batteries emit hydrogen gas. Explosion or fire can result. Keep sparks and open flame away. Keep covers open when charging.

NOTE: If the charger “FAULT CODE” lights flash when the batteries are plugged into the charger, refer to the charger manufacturer manual for fault code definitions.
7. The Tennant charger will start automatically. When the batteries are fully charged, the Tennant charger will automatically turn off.

NOTE: Use a charger with the proper rating for the batteries to prevent damage to the batteries or reduce the battery life.

NOTE: If the charger needs to be disconnected from the machine before the batteries are fully charged and the charger has not automatically shut off, turn off the charger before disconnecting.

8. After the charger has turned off, unplug the charger connector from the battery connector on the machine.

ATTENTION: Do not disconnect the charger DC cord from the machine receptacle when the charger is operating. Arcing may result. If the charger must be interrupted during charging, disconnect the AC power supply cord first.

9. Reconnect the battery connector to the machine connector.

10. Close the main cover.
FUSES, RELAYS, AND CIRCUITBREAKERS

FUSES

Fuses are one-time protection devices designed to stop the flow of current in the event of a circuit overload. Never substitute higher value fuses than specified.

The fuses are located in the control box.

<table>
<thead>
<tr>
<th>Fuse</th>
<th>Rating</th>
<th>Circuit Protected</th>

</tr>
</tbody>
</table>

RELAYS

Relays are electrical switches that open and close under the control of another electrical circuit. Relays are able to control an output circuit of higher power than the input circuit. The relays are located in the electrical control panel and near the circuit breaker panel.

Refer to the table below for the relays and circuits controlled.

<table>
<thead>

</tbody>
</table>
CIRCUIT BREAKERS

The circuit breakers are resettable electrical circuit protection devices. Their design stops the flow of current in the event of a circuit overload. Once a circuit breaker is tripped, it must be reset manually. Press the reset button after the breaker has cooled down.

If the overload that caused the circuit breaker to trip is still there, the circuit breaker will continue to stop current flow until the problem is corrected.

The circuit breakers are located underneath the operator seat.

</table>

ELECTRIC MOTORS

The carbon brushes on the propelling and accessories motors should be inspected after every 800 hours of machine operation.
BELTS

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

HYDRAULIC PUMP BELT
Check the hydraulic pump belt tension and wear after every 200 hours of operation. The correct tension is when the belt at midpoint deflects 4 mm (0.15 in) from a force of 2.5 kg (5.5 lb).

WARNING: Moving belt. Keep away.

VACUUM FAN BELT
Check the vacuum fan belt tension and wear after every 200 hours of operation. The correct tension is when the belt deflects 4 mm (0.16 in) from a force of 0.7 kg (1.5 lb) at belt midpoint.

MAIN BRUSH INTERMEDIATE BELT
Check the main brush intermediate belt tension and for wear after every 200 hours of operation. The correct tension is when the belt deflects 8 mm (0.3 in) from a force of 2.3 kg (5 lb) at belt midpoint.

WARNING: Moving belt. Keep away.

MAIN BRUSH BELT
Check the main brush belt for wear after every 200 hours of operation. The spring idler keeps tension on the belt.
HEPA (HIGH EFFICIENCY PARTICULATE ARRESTANCE) FILTRATION SYSTEM (OPTION)

The High Efficientcy Particulate Arrestance (HEPA) filtration system is a dry sweeping system consisting of the dry dust control, cyclone chamber, and HEPA filter box. The filters, skirts and seals in each of these areas are critical in the performance of the HEPA system.

The optional HEPA filtration system helps clean in fine dust environments.

NOTE: While cleaning or performing any type of maintenance on HEPA filter systems, refer to company or local regulations regarding safety requirements.

HOPPER

Inspect and clean the hopper daily.

1. Turn on the machine, raise the hopper approximately 3–4 in. (76.2–101.6 mm), open hopper dump door, and turn off the machine.

   WARNING: Lift arm pinch point. Stay clear of hopper lift arms.

2. Open the hopper access door.

3. Clean any debris from hopper.

4. HEPA Machines: Use a garden hose to clean the hopper out through the hopper access door.

5. Close and secure the hopper access door.

6. Close and secure the hopper cover.

7. Turn on the machine and lower the hopper.

8. Allow hopper to fully dry before using machine.
HOPPER DUST FILTER

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

REPLACING THE HOPPER DUST FILTER

Inspect and clean the hopper dust filter and filter cover after every 100 hours of machine operation or 50 hours on machines equipped with HEPA. Replace damaged dust filters.

NOTE: Clean the filter more often if used in extremely dusty conditions.

1. Press the filter shaker button to shake dust and debris from the primary dust filter.

2. Unlatch and open the hopper cover. Support the hopper cover open with the hopper cover prop rod.

3. Completely loosen the two wing nuts securing the dust filter cover to the upper cyclone chamber.

4. Non-HEPA Machines: Remove the dust filter cover.

5. HEPA Machines: Remove the HEPA filter assembly.

6. HEPA Machines: Clean and inspect the HEPA filter assembly seal for wear and damage. Replace the seal if it is worn or damaged.

NOTE: If dust is detected on the inside of the cover, check filter seal height.
7. Use both hands to firmly grasp the dust filter and carefully lift the dust filter from the dust filter compartment. **DO NOT** use the seal to lift the dust filter from the dust filter compartment.

8. Clean or discard the dust filter element. Refer to *CLEANING THE DUST FILTER*.

9. Clean the upper cyclone chamber. Refer to *CLEANING THE UPPER CYCLONE CHAMBER*.

10. Reinstall the dust filter.

11. Reinstall the dust filter cover or HEPA filter assembly.

12. Close the hopper cover.

**CHECK DUST FILTER SEAL HEIGHT**

If excessive dust occurs while sweeping, check the dust filter seal height. The distance from the shaker bracket to the top of the compartment should be 8.125 in. (206.375 mm). Adjust if necessary.
CLEANING THE DUST FILTER

MACHINES WITH STANDARD FILTRATION SYSTEM

Use one of the following methods to clean the dust filter:

SHAKING–Press the filter shaker switch.

TAPPING–Tap the filter gently on a flat surface. Do not damage the edges of the filter. The filter will not seal properly if the edges of the filter are damaged.

AIR–Always wear eye protection when using compressed air. Blow air through the center of the filter and out toward the exterior. Never use more than 550 kPa (80 psi) of air pressure with a nozzle no smaller than 3 mm (0.13 in) and never hold the nozzle closer than 50 mm (2 in) to the filter.

MACHINES EQUIPPED WITH HEPA FILTRATION SYSTEM

Use one of the following methods to clean the dust filter on machines equipped with HEPA.

SHAKING–Press the filter shaker switch.

TAPPING–Place the filter into a plastic bag and gently tap the filter gently on a flat surface. Do not damage the edges of the filter. The filter will not seal properly if the edges of the filter are damaged.

DO NOT use air to clean the dust filter.

Inspect the dust filter seals for proper seal and damage. Dust build up on the seal surfaces means dust is getting past the dust filter, significantly reducing the HEPA filter life.
CLEANING THE CYCLONE ASSEMBLY

CLEANING THE UPPER CYCLONE CHAMBER

Clean the upper cyclone chamber and filter housing every 100 hours of machine operation or 50 hours on machines equipped with HEPA.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

1. Clean dust and debris from the dust filter housing.

2. Machines (S/N 006266– ), open the front clean out door on the upper cyclone chamber and clean.

3. HEPA Machines: Use a HEPA certified vacuum to clean dust and debris from the interior of the upper cyclone chamber.

   NOTE: A HEPA certified vacuum is recommended to clean the HEPA filter system. Refer to company or local regulations regarding safety requirements.

4. HEPA Machines: Use a HEPA certified vacuum to clean the slots located at the top of the dust filter compartment.

5. Close and secure the upper cyclone chamber access door when finished cleaning the interior of the upper cyclone chamber.
CLEANING THE LOWER CYCLONE CHAMBER

Clean the cyclones after every 100 hours of operation.

CLEANING THE LOWER CYCLONE CHAMBER (HEPA OPTION)

Machines equipped with HEPA require additional cleaning of the lower cyclone chamber and Perma–Filter. Clean the lower cyclone chamber and Perma–Filter every 200 hours of operation.

1. Disconnect the vacuum hose from the upper cyclone chamber.
2. Disconnect the main wire harness from the filter shaker assembly and remove the filter shaker assembly from the filter compartment.
3. Disconnect the main wire harness from the cyclone chamber temperature switch.
4. Loosen clamps securing the upper cyclone chamber to hopper and remove the upper cyclone chamber from the hopper.

5. Inspect and clean the upper cyclone chamber seal. Replace seals if they are damaged or worn.

6. Inspect and clean the filter chamber inlet seal. Replace seal if they are damaged or worn.

7. Disconnect the main wire harness from the lower cyclone chamber harness.

8. Remove the hardware securing the main wire harness to the lower cyclone chamber.
9. Remove the four brackets securing the lower cyclone chamber to the hopper.

10. With the help of an assistant, lift the lower cyclone chamber and remove it from the hopper.

11. Turn on the machine, raise the hopper approximately 3–4 in. (76.2–101.6 mm), open hopper dump door, and turn off the machine.

12. Open the hopper access door.

13. Clean all dirt and debris from the hopper.

14. Use a garden hose to clean out the filter compartment and lower cyclone compartment.

15. Inspect cyclone Perma-Filter inside the lower cyclone compartment for debris.

16. Clean the cyclone Perma-Filter using a garden hose.
17. Inspect the lower cyclone chamber flaps and ensure they open and close completely. Remove any excessive dust buildup on the flaps.

18. Allow the lower cyclone compartment / dust filter compartment / Perma–Filter compartment to completely dry.

19. Turn on the machine, lower the hopper, and turn off the machine.

20. With the help of an assistant, reinstall the lower cyclone chamber into the hopper. Ensure no hoses or harness leads are pinched between the bottom of the lower cyclone chamber and the top of the hopper.

21. Reinstall the four brackets to secure the lower cyclone chamber to the hopper.

22. Secure the main wire harness to the lower cyclone chamber and reconnect the main wire harness to the lower cyclone chamber harness.

**NOTE:** Be sure the main wire harness is routed to the outside of the bracket. The upper cyclone chamber will not seat properly if harness is routed to the inside.

23. Reinstall the upper cyclone assembly, dust filter, and HEPA filter assembly in reverse order of disassembly.

**CYCLONE PERMA–FILTER**

Clean heavy or wet dust and excess debris from the cyclone Perma–Filter as necessary. Check the cyclone Perma–Filter for damage every 100 hours of operation.
INSPECT AND CLEAN THE HEPA FILTER HOUSING (OPTION)

Inspect and clean the HEPA filter housing after every 400 hours of machine operation. Replace the HEPA filter if it is plugged and / or damaged.

1. Unlatch and open the hopper cover. Support the hopper cover open with the hopper cover prop rod.

2. Loosen the three clamps securing the cover to the HEPA filter assembly and remove the cover.

3. Remove the HEPA filter from the HEPA filter compartment.

4. Inspect the HEPA filter and seals for dust, debris, and damage. Replace the HEPA filter if filter or filter seals are damaged.

5. Use a HEPA certified vacuum to clean the HEPA filter compartment and the HEPA filter housing inlet hose.

NOTE: A HEPA certified vacuum is recommended to clean the HEPA filter system. Refer to company or local regulations regarding safety requirements.
6. Reinstall the HEPA filter into the HEPA filter assembly. Be sure the arrow on the HEPA filter label is pointing up.

7. Reinstall the cover onto the HEPA filter assembly. Ensure all three clamps are completely reinstalled and hold the cover firmly onto the HEPA filter assembly.
MAIN BRUSH

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

Check the brush daily for wear or damage. Remove any string or wire tangled on the main brush, main brush drive hub, or main brush idler hub.

Check the main brush pattern and rotate the brush end-for-end after every 50 hours of operation, for maximum brush life and best sweeping performance. Refer to REPLACING OR ROTATING THE MAIN BRUSH.

Replace the brush when it no longer cleans effectively.

REPLACING OR ROTATING THE MAIN BRUSH

1. Raise the brush head.

2. Open the right side main brush access door.

3. Loosen the brush idler plate T–bolt. Remove the brush idler arm assembly.

4. Pull the main brush from the main brush compartment.

5. Replace or rotate the main brush end–for–end.

6. Slide the brush into the brush compartment and all the way onto the drive plug.

7. Reinstall the brush idler plate.

8. Close the main brush access door.

9. Check and adjust the brush pattern if needed. Refer to CHECKING THE MAIN BRUSH PATTERN.
CHECKING THE MAIN BRUSH PATTERN

1. Apply chalk, or a similar marking material, to a smooth and level section of the floor.

NOTE: If chalk or other material is not available, allow the brush to spin on the floor for two minutes. A polish mark will remain on the floor.

2. Lower the main brush onto the chalked area and hold it there for 15 to 20 seconds without moving the machine.

3. Raise the brush and drive the machine from the chalked area. The brush pattern should be 50 to 75 mm (2.0 to 3.0 in) across the entire length of the brush. Refer to ADJUSTING THE MAIN BRUSH WIDTH.

ADJUSTING THE MAIN BRUSH TAPER

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

1. Remove the brush idler plate and brush.

2. Loosen the shaft bearing bracket mounting bolts.

3. Move the bracket up or down in the slots and tighten the mounting bolts.

4. Reinstall the brush and brush idler plate.

5. Check the main brush pattern and readjust as necessary. Maximum taper is 13 mm (0.5 in). Set the main brush adjustment knob to the same color band as the brush idler plate.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

4. If the brush pattern is tapered, see ADJUSTING THE MAIN BRUSH TAPER section of this manual.
ADJUSTING THE MAIN BRUSH WIDTH

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

1. Compare the length of the main brush bristles with the color band on the brush idler plate.

2. Loosen the main brush adjustment knob and slide the pointer so it matches the color band on the brush idler plate. Retighten the knob.

3. Recheck the pattern. Readjust if necessary.

SIDE BRUSH(ES)

Check the brush(es) daily for wear or damage. Remove any string or wire found tangled in the brush(es) or drive hub(s).

Replace the brush(es) when it no longer cleans effectively.

REPLACING THE SIDE BRUSH

1. Stop the machine, set the parking brake and turn the engine off.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

2. Remove the side brush retaining pin from the side brush drive shaft by pulling the pin keeper off over the end of the pin.

3. Slide the side brush off the side brush drive shaft.

NOTE: Remove the drive hub and put it on the new brush if one is not installed.

4. Slide the new side brush onto the side brush drive shaft.

5. Insert the side brush retaining pin through the side brush hub and shaft.

6. Secure the pin by clipping the pin keeper over the end of the pin.

7. Adjust the side brush pattern with the side brush down pressure knob.
ADJUSTING THE SIDE BRUSH PATTERN
Check the side brush pattern after every 50 hours of operation. The side brush bristles should touch the floor in the patterns shown in the illustration.

Turn the knob(s) counterclockwise to increase the brush pressure and clockwise to decrease the brush pressure.

SIDE BRUSH GUARD
Rotate the side brush guard 90° after every 200 hours of operation, or sooner if worn. Replace the brush guard after using all four sides.

SIDE BRUSH PIVOT
The side brush pivot should be checked for excessive movement after every 200 hours of operation.

The side brush side tilt (left to right) is adjusted with the two bolts.

The side brush front to rear tilt is adjusted with the side brush cable and clevis pin.
SKIRTS, FLAPS, AND SEALS

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

HOPPER LIP SKIRT
The hopper lip skirt is located on the bottom rear of the hopper. The skirt floats over debris and helps deflect that debris into the hopper.

Check the hopper lip skirt for wear or damage daily.

Replace the hopper lip skirt when it no longer touches the floor.

HOPPER SIDE SKIRT
The hopper side skirt is located on the left side of the hopper. The hopper side skirt should clear the floor by 3 mm (0.12 in).

Check the hopper side skirt for wear or damage and adjustment daily.

BRUSH DOOR SKIRTS
The brush door skirts are located on the bottom of each of the two main brush doors. The skirt should clear the floor by 3 mm (0.12 in).

Check the skirts for wear or damage and adjustment daily.

NOTE: The brush door skirts have slotted holes to allow for a ground clearance adjustment. Adjust the skirt height with the door closed.

NOTE: Rear tire pressure will affect skirt clearances.

REAR SKIRTS
The two rear skirts are located on the bottom rear of the main brush compartment. The vertical skirt should clear the floor up to 3 mm (0.12 in). The recirculation skirt requires no adjustment.

Check the skirts for wear or damage and adjustment daily.
SIDE BRUSH DUST CONTROL SKIRTS (OPTION)
The side brush dust control skirts wrap around the side brush and the front bumper.
Check the side brush dust control skirts for wear or damage daily.

BRUSH DOOR SEALS
The brush door seals are located on both main brush doors and on corresponding portions of the main frame.
Check the seals for wear or damage after every 100 hours of operation.

HOPPER SEALS
The hopper seals are located on the top and side portions of the hopper.
Check the seals for wear or damage after every 100 hours of operation.

HOPPER ACCESS DOOR SEAL
The hopper access door seal is located on the hopper and seals the front of the debris hopper.
Check the seal for wear or damage after every 100 hours of operation.
INNER HOPPER ACCESS DOOR SEAL (OPTION – VACUUM WAND ONLY)

The inner hopper access door seal is located on the hopper and seals the front of the debris hopper.

Check the seal for wear or damage after every 100 hours of operation.

HOPPER DOOR SEALS

The hopper door seals are located on the hopper door. They seal the hopper when the hopper door is closed.

Check the seals for wear or damage after every 100 hours of operation.

FILTER CHAMBER INLET SEAL

Check the filter chamber inlet seal for wear or damage every 100 hours of operation.

CYCLONIC CHAMBER AND DUST TRAY FLAPS

Check the cyclonic chamber and dust tray flaps for wear, damage, and debris buildup every 100 hours of operation or daily on machines equipped with HEPA. Inspect both flaps through the open hopper door. Both flaps should open and move freely.

If flaps do not open and move freely, remove dirt and debris preventing the flaps from opening. If necessary, use water to rinse dirt and debris from the flaps and the area around the flaps.
MAINTENANCE

CYCLONE COVER SEALS
Check the cyclone cover seals for wear or damage every 100 hours of operation. Clean dust and debris from the cyclones as necessary.

CYCLONE COVER ACCESS PORT SEAL
(S/N 006266 –)
Check the cyclone cover access port seal for wear or damage every 100 hours of operation. Clean dust and debris from the seal as necessary.

HOPPER DUST FILTER COVER SEAL
Check the hopper dust filter cover seal for wear or damage every 100 hours of operation or every 50 hours on machines equipped with HEPA. Clean dust and debris from the seal as necessary.
BRAKES AND TIRES

BRAKES

The mechanical brakes are located on the front wheels. The brakes are operated by the foot brake pedal and connecting rods.

Check the brake adjustment after every 200 hours of operation.

To check the brake adjustment, measure the distance from the stationary brake pedal to the point where there is resistance in the pedal movement. The distance must be between 12 mm (0.5 in) and 25 mm (1.0 in). Adjust the brakes if required.

TIRES

All the tires on the machine are solid. Check the front tires after every 100 hours of operation for damage.

REAR WHEEL

Torque the rear wheel nuts twice in the pattern shown to 122–155 Nm (90–110 ft lb) after the first 50 hours of operation, and every 800 hours of operation.

FILTER SCREENS

The wet side brush dust control has 2 filter screens. One is located in the water tank and the other under the main cover.

Remove and clean the filter screens after every 200 hours of operation.
MAINTENANCE

SPRAY NOZZLES
The wet side brush dust control nozzles are located above the side brush (es). Check the spray pattern after every 50 hours.

To adjust the spray pattern, use the water valve located next to the water tank. Do not open the valve to the 90° maximum position. Optimal position is with the valve opened between 10° - 15°.

STORING THE WATER TANK
When not using the wet side brush dust control system, the tank can be stored on the main cover.

Drain the water tank.

Disconnect the 2 water hoses.

Disconnect the wire harness below the tank.

Secure the tank to the main cover with the strap.
PUSHING, TOWING, AND TRANSPORTING THE MACHINE

PUSHING OR TOWING THE MACHINE

If the machine becomes disabled, it can be pushed from the front or rear, but only towed from the rear.

Only push or tow the machine for a very short distance and do not exceed 3.2 kp/h (2 mph). It is NOT intended to be pushed or towed for a long distance or at a high speed.

TRANSPORTING THE MACHINE

1. Position the machine at the loading edge of the truck or trailer.

FOR SAFETY: When loading machine onto truck or trailer, empty hopper before loading machine. Do not load/unload on ramp inclines that exceed 25% grade.

2. If the loading surface is not horizontal or is higher than 380 mm (15 in) from the ground, use a winch to load machine.

   If the loading surface is not horizontal or is higher than 380 mm (15 in) from the ground, use a winch to load machine.

3. To winch the machine onto the truck or trailer, attach the winching chains to the rear tie down locations. The rear tie-down locations are the holes in the sides of the machine frame near the rear bumper.

   FOR SAFETY: When loading machine onto truck or trailer, use winch. Do not drive the machine onto the truck or trailer unless the loading surface is horizontal AND is 380 mm (15 in) or less from the ground.

4. Position the machine onto the truck or trailer as far as possible. If the machine starts to veer off the center line of the truck or trailer, stop and turn the steering wheel to center the machine.

5. Set the parking brake and block the machine tires. Tie down the machine to the truck or trailer before transporting.

   The front tie-down locations are the holes in the wheel pockets at the front of the machine frame.

   The rear tie-down locations are the holes in the sides of the machine frame near the rear bumper.

6. If the loading surface is not horizontal or is higher than 380 mm (15 in) from the ground, use a winch to unload machine.

   If the loading surface is horizontal AND is 380 mm (15 in) or less from the ground, the machine may be driven off the truck or trailer.

   FOR SAFETY: When loading machine onto truck or trailer, use winch. Do not drive the machine onto the truck or trailer unless the loading surface is horizontal AND is 380 mm (15 in) or less from the ground.
MACHINE JACKING

Empty the hopper before jacking up the machine. Jack up the machine at the designated locations. Use a hoist or jack capable of supporting the weight of the machine. Use jack stands to support the machine.

FOR SAFETY: Before leaving or servicing machine, stop on level surface, set parking brake, turn off machine, and remove key.

FOR SAFETY: When servicing machine, block machine tires before jacking machine up. Use a hoist or jack that will support the weight of the machine. Jack machine up at designated locations only. Support machine with jack stands.

The rear jacking location is the center of the rear bumper.

Front jacking locations are located on the frame directly in front of the front tire.

STORAGE INFORMATION

The following steps should be taken prior to storing the machine for extended periods.

1. Park the machine in a cool, dry area. Do not expose the machine to rain or snow. Store indoors.

2. Charge the batteries before storing the machine to prolong the life of the batteries. Disconnect the batteries and recharge once a month.

NOTE: To prevent potential machine damage store machine in a rodent and insect free environment.

FREEZE PROTECTION FOR WET SIDE BRUSH DUST CONTROL SYSTEM

1. Drain the water tank with the drain valve located under the tank.

2. Drain the water lines and pump by pressing on the wet side brush dust control switch to the on position. Press the switch to the off position when the wet side brush dust control light turns red.

3. Remove the wet side brush dust control filter screen, located under the main cover, and empty it.
